

Request

PHP startet

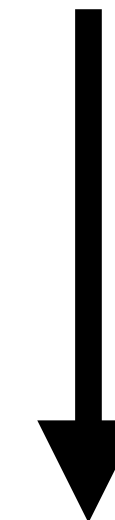

Contao erstellt das HTML der Webseite und benachrichtigt die Background-Worker, dass die Webseite noch indiziert werden muss.

Response

HTML fertig

PHP endet

```

26  class SearchIndexListener
42      public function __invoke(TerminateEvent $event): void
49
50          $request = $event->getRequest();
51          $document = Document::createFromRequestResponse($request, $response);
52          $needsIndex = $this->needsIndex($request, $response, $document);
53          $success = $event->getResponse()->isSuccessful();
54
55          if ($needsIndex && $success && $this->enabledFeatures & self::FEATURE_INDEX) {
56              $this->messageBus->dispatch(SearchIndexMessage::createWithIndex($document));
57          }
58
59          if (!$success && $this->enabledFeatures & self::FEATURE_DELETE) {
60              $this->messageBus->dispatch(SearchIndexMessage::createWithDelete($document));
61          }
62      }
63
64  private function needsIndex(Request $request, Response $response, Document $document): bool
65  {
66      // Only handle GET requests (see #1194)
67      if (!$request->isMethod(Request::METHOD_GET)) {
68          return false;
69      }

```
