The legacy content elements and their templates are still around and will only be dropped in Contao 6. If you want to use them instead of the new ones, you can opt in on a per-element basis by adding the respective lines to your `contao/config/config.php`:

```
// Restore legacy content elements
$GLOBALS['TL_CTE']['texts']['code'] = \Contao\ContentCode::class;
$GLOBALS['TL_CTE']['texts']['headline'] = \Contao\ContentHeadline::class;
$GLOBALS['TL_CTE']['texts']['html'] = \Contao\ContentHtml::class;
$GLOBALS['TL_CTE']['texts']['list'] = \Contao\ContentList::class;
$GLOBALS['TL_CTE']['texts']['text'] = \Contao\ContentText::class;
$GLOBALS['TL_CTE']['texts']['table'] = \Contao\ContentTable::class;
$GLOBALS['TL_CTE']['links']['hyperlink'] = \Contao\ContentHyperlink::class;
$GLOBALS['TL_CTE']['links']['toplink'] = \Contao\ContentToplink::class;
$GLOBALS['TL_CTE']['media']['image'] = \Contao\ContentImage::class;
$GLOBALS['TL_CTE']['media']['gallery'] = \Contao\ContentGallery::class;
$GLOBALS['TL_CTE']['media']['player'] = \Contao\ContentPlayer::class;
$GLOBALS['TL_CTE']['media']['youtube'] = \Contao\ContentYouTube::class;
$GLOBALS['TL_CTE']['media']['vimeo'] = \Contao\ContentVimeo::class;
$GLOBALS['TL_CTE']['files']['downloads'] = \Contao\ContentDownloads::class;
$GLOBALS['TL_CTE']['files']['download'] = \Contao\ContentDownload::class;
$GLOBALS['TL_CTE']['includes']['teaser'] = \Contao\ContentTeaser::class;
```

The following content elements and modules were already implemented as fragment controllers before. As of Contao 5.0, they are Twig-only and also follow the new naming scheme:

- template content element (`ce_template` → `content_element/template`)
- markdown content element (`ce_markdown` → `content_element/markdown`)
