hook-module   hook-member

activateAccount

The `activateAccount` hook is triggered when a new front end account is activated. It passes the `MemberModel` of the activated account and the `Module` object of the calling front end module as arguments and does not expect a return value.

Parameters

1. *|Contao|MemberModel* `$member`

   A model of the activated user account.

2. *|Contao|Module* `$module`

   The registration module that was used to activate the account.
