README MIT license

An SQLite based, PHP-only fulltext search engine.

Loupe...

- ...only requires PHP and SQLite, you don't need anything else - no containers, no nothing
- ...is typo-tolerant (based on the State Set Index Algorithm and Levenshtein)
- ...supports phrase search using `"` quotation marks
- ...supports filtering (and ordering) on any attribute with any SQL-inspired filter statement
- ...supports filtering (and ordering) on Geo distance
- ...orders relevance based on a typical TF-IDF Cosine similarity algorithm
- ...auto-detects languages
- ...supports stemming
- ...is very easy to use
