Group legacy templates in the Template Studio tree #8868

Open Feature

m-vo opened last week Member

Description

With #8828 there will be a lot of templates without a directory in their name. We should probably try to mark them (maybe by looking up if a `html5` variant exists) and group them under a virtual `legacy` node (just visual in `backend/template_studio/tree/_tree.html.twig`, not adjusting the name).

We also might want to make nodes collapsible, but this could also be improved in a followup PR.
