This makes the Contao date formats (`datimFormat` , `dateFormat` , `timeFormat`) available in Twig templates via the `contao` Twig global. This is needed for #8011, #8020 and #8066 - e.g.

```
{{ app.user.lastLogin|date(contao.datim_format) }}
```

Note: I noticed that we currently use two different styles for the function names within `ContaoVariable` :

- `getFoo_bar` (e.g. `getHas_backend_user`)
- `foo_bar` (e.g. `backend_user`)

Should we normalise this?

Add a general `From` override for the `ContaoMailer` #8495

leofeyer merged 3 commits into `contao:5.x` from `fritzmg:feature/mailer-…` on Jul 1

And then this will only apply to emails generated by a request to the respective front end. Any other system generated emails (via a Cronjob for example) will not be affected.

This PR adds a simple

```
# config/config.yaml
contao:
    mailer:
        override_from: Override From <override@example.com>
```

config which will be applied to *any* email sent via the `ContaoMailer` (Symfony Mailer) - unless of course a specific `X-Transport` is chosen for which a `from` address has been defined, then that `From` address will of course still be used.

This allows you to only configure the SMTP server via the normal `MAILER_DSN` environment variable and then override the `From` address via the config, without having to specifically define and select any mailer transports.

Note: this will not affect Symfony's `mailer:test` command, as this command bypasses the `mailer` service.
