Popular PHP Templating Engines

1. Twig

Twig, created by SensioLabs (the creators of Symfony), is arguably the most popular templating engine today.

Example:

```
{# templates/home.html.twig #}
<h1>Hello {{ name }}!</h1>

{% if is_logged_in %}
    <p>Welcome back!</p>
{% else %}…
```

User groups

Filter: Back end m... | Content ele... | Form fields | Front end m... | Deactivate

Search: Title = | Show: 1 - 1

There is at least one user group granting access to the template editor. Since templates are PHP files, users of these groups implicitly have full control over the system!
